                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       source
             requests: clonerequest@sanger.ac.uk
On Aug 31, 2001 this sequence version replaced gi:14161146.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
one plasmid subclone or more than one M13 subclone; and the
assembly was another and by activations were covered by at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               10653 GGACAAGCCCTGACAAGCCA 10672

Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average the sequence assembly is based on at least 8X average.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (05-FEB-2003) NIH Intramural Sequencing Center, 8717 Grovemont Circle, Gaithersburg, MD 20877, USA On Feb 5, 2003 this sequence version replaced gi:27884867.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and by the finished sequence as soon as it is available and

                                                                                                                                                                                                                                                                              as STSs and 81,000 SNPs were annotated with alleles from C57BL/6J and the strain from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.
                                                                                                                                                                                                                                                                                                                                             WGS-discovery: Paired-end low-coverage whole genome shotgun reads were generated from 129S1/SvImJ, C3H/HeJ, and BALB/cByJ. The WGS reads were placed uniquely on the MGSCv3 C57BL/6J assembly and SNP detection was carried out by SSAHA-SNP. 225,000 reads were annotated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            18;

The present sequence is one of 3351 sequences in a library of human polynucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotide and for detection of transcription levels. Ribozymes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAF64773 standard; cDNA; 402
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for cancer chemotherapy. This sequence represents a fragment of the human CD95 receptor intron 1 which contains a p53 binding region described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 266 BP; 49 A; 72 C; 110 G; 35 T; 0 other;

RESULT 3
                                          ABQ17575 to ABQ20506 represent isolated polynucleotide (I) sequences, and invention. (I) and (II) have cytostatic activity and can be used in gene present prosent invention are useful for diagnosing, preventing and treating immune response. They can also be useful in virology, microbiology, molecular biology and recombinant DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

                                                                                                                                                                                     The present invention relates to the isolation of novel human enzyme CC polypeptides (AAUZ2915-AAUZ3814), and the cDNA and genomic sequences controlled classes of controlled classes of the invention may comprise the controlled classes or ligases. The sequences of the invention may comprise the CC diagnosis, treatment, prevention and/or prognosis of a wide range of CC diagnosis, treatment, prevention and/or prognosis of a wide range of CC diagnosis, including hyperproliferative disorders (e.g. cancer), CC (e.g. arthritis), neurological disorders (e.g. cancer), CC (e.g. arthritis), neurological disorders (e.g. Alos) autoimmune disorders (e.g. arthritis), reproductive (e.g. altheimer's disease), CC (e.g. infertility) and infectious disorders (e.g. altheimer's disease), CC (e.g. infertility) and infectious disorders (e.g. altheroselerosis), CC polymucleotides of the invention can also be used in gene therapy. CC Note: The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published not sequences.
                                                                                                                                                                                        Query Match

The present invention describes a method (MI) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences (given in ABL61664 expression of at least 95% identical to (S), where a change in comprises a sequence (S) selected from 847 sequences (divention of BL70110), or is at least 95% identical to civity. (I) has cytostatic to ABL70110, and can be used in gene therapy. MI can be used for screening expression is indicative of anti-neoplastic agent which activity and can be used in gene therapy. MI can be used for product which are in the data collected with respect to the anti-neoplastic agent as a is the data collected with respect to the activity and can be used in the structure and/or properties of the agent. MI can be used in the
                                                                                                                                                                                                                                                                                                                                                     (AVAL-) AVALON PHARM.
                                                                                                                                                                                                                    screening for anti-neoplastic agent involves exposing cells to a screening for anti-neoplastic artivity, and chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set
                                                                                                                                                                                                                                                                                                           soppet DR,

New human mitochondrial malate enzyme and DNA encoding it for the first studying carbon metabolism in cells, also specific antibodies

purificn. and assay

Claim 1; Page 46 + Fig 3; 60pp; German.

The sequence may be used to study C-metabolism in rapidly dividing

(tumour) cells, esp. pyruvate from the supernatant of mitochondrial (tumour) cells, esp. pyruvate from the supernatant of mitochondrial The enzyme was first isolated from the supernatant of mitochondrial preparations from the transformed human T-lymphocyte cell line preparations from the transformed human T-lymphocyte cell line preparations from the transformed human T-lymphocyte and used as a preparation of oligonucleotides. These were used in PCR basis for the design of oligonucleotides. These were subcloned for amplification of malate enzyme encoding DNA in a CDNA bank for amplification of malate enzyme sendents were subcloned for amplification of malate enzyme the fibrosarcoma bank. In pUC18, sequenced and used to probe the fibrosarcoma bank. A 1923bp insert was isolated and cloned in Bluescript KS+.

The invention relates to novel genes (ABL89449-ABL90853) and proteins CC (ABB89040-ABB90444) useful for preventing, treating or ameliorating CC medical conditions e.g. by protein or gene therapy. The genes are CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast (CC and ovarian cancer and other cancers of the adrenal gland, bone, bone CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune (CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune (CC (disease, multiple sclerosis, rhemmatoid arthritis and ulcerative (cC (d) wound healing, (e) neurological disease e.g. cerebral anoxia and (f) infections.

CC (d) wound healing, (e) neurological diseases e.g. cerebral anoxia and (f) infections diseases such as wycardial ischaemias, fungal content of the sequence data for this material, bacterial, fungal
Note: The sequence data for this patent did not form part of the

```
The present invention relates to the isolation of novel human enzyme CC polypeptides (AMUZ2915-AAUZ3814), and the cDNA and genomic sequences concluding them. The enzyme polypeptides of the invention may comprise the cCC encoding them. The enzyme polypeptides of the invention may comprise the cCC functional classes of oxidoreductases, transferases, hydrolases, lyases, cCC diagnosis, treatment, prevention and/or prognosis of a wide range of CC diagnosis, treatment, prevention and/or prognosis of a wide range of CC diagnosis, treatment, prevention and/or prognosis of a wide range of CC quisonesse including hyperproliferative disorders (e.g. cancer), CCC disorders including hyperproliferative disorders (e.g. cancer), CCC (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), CCC (e.g. arthritis), candiovascular disorders (e.g. Alzheimer's disorders (e.g. arthritis), candiovascular disorders (e.g. atherosclerosis), CCC (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), The CCC plood-related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The CCC plood-related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza) human CCC AAS40785-AAS41684 represent cDNA sequences encoding for the movel human CCC ange polypeptides of the invention.

CCC sequence data for this patent did not form part of the printed cryst production, but was obtained in electronic format directly from WIPO at figure at figure and polypeptides of the grant disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                17-NOV-2000;

                                                                                                                                            The present sequence encodes a novel protein kinase. The nucleic acids CC and the protein kinases they encode may be used in the treatment and CC diagnosis of diseases associated with inappropriate kinase expression cc such as immune-related diseases and disorders, cardiovascular disease, cc complementary sequences may also be used as DNA probes in diagnostic CC assays. The kinase expression and activity also be used as DNA probes in diagnostic CC and kinase expression and activity. Anti-kinase antibodies of kinase expression and activity. Anti-kinase antibodies CC artivity include rheumatoid arthritis, atherosclerosis, autoimmune CC disorders, complications of organ transplantation, myocardial infarction, CC contonic inflammatory pelvic disease, strokes, renal failure, chronic inflammatory pelvic disease, multiple sclerosis, asthma, cc reproductive disorders, rhinitis, autoimmunity, diabetes, cancers and

XX
The present invention relates to the isolation of novel human enzyme
CC
polypeptides (AAUZ2915-AAUZ3814), and the cDNA and genomic sequences
CC
encoding them. The enzyme polypeptides of the invention may comprise the
CC
encoding them. The enzyme polypeptides of the invention may comprise the
CC
encoding them. The enzyme polypeptides of the invention may comprise the
CC
encoding them. The sequences of the invention are useful in the
CC
disonerases or ligases. The sequences of the invention are useful in the
CC
encoding them. The sequences of the invention are useful in the
CC
disorders including hyperproliferative disorders (e.g. cancer),
CC
encoding hyperproliferative disorders (e.g. cancer),
CC
encoding hyperproliferative disorders (e.g. cancer),
CC
encoding hyperproliferative disorders (e.g. Alzheimer's disease),
CC
encoding hyperproliferative disorders (e.g. Alzheimer's disease),
CC
encoding hyperproliferation disorders (e.g. Alzheimer's disease),
CC
encoding hyperproliferation disorders (e.g. atherosclarosis),
CC
encoding hyperproliferation disorders (e.g. atherosclarosis),
CC
encoding hyperproliferation disorders (e.g. influenza) The
CC
controlled disorders (e.g. haemophilia), reproductive disorders
(e.g. asthma), cardiovascular disorders (e.g. influenza) The
CC
encoding hyperproliferation disorders (e.g. influenza) The
controlled disorders (e.g. haemophilia), reproductive disorders
(e.g. asthma), cardiovascular disorders (e.g. influenza) The
cc
cc encoding hyperproliferation disorders (e.g. influenza) The
cc encoding hyperproliferation disorders (e.g. theroscaleration disorders (e.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-DEC-2000; 2000US-0250160.

Lactococcal used to control expression of the B. subtilis neutral constructs used for transformation of lactic acid bacterial strains. The npr gene can be engineered to code for an enzyme strains. The npr gene can be engineered to code for an enzyme (see neutral protease properties of the bacterium transformant allows the intended application. The method is especially used to cheese maritima.

The invention relates to a protein (ABP25413-ABP30895) from group B CC Streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (CC (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in CC activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and CC antibodies that bind (I) are used in the manufacture of medicaments for CC the treatment or prevention of infection or disease caused by the treatment or prevention of infection or disease caused by CC Nucleic acids encoding (I) are used in detertable and S. pyrogenes. (CC (I). A composition comprising (I) or a nucleic streptococcus in a CC used as a vaccine or disgnostic composition. The disease caused by CC streptococcus that is prevented or treated may be mentingitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be constant of the constant of th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The polynucleotide sequences given in AAA26346 to AAA26458 encode the human secreted proteins given in AAY91451 to AAY91691. The human secreted proteins can have activities based on the tissues and cells they are expressed in Examples of the activities are: cytostatic; neuroprotective; immunosuppressive; antiinflammatory; nootropic; neuroprotective; immunosuppressive; activities are:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disorders, immune diseases, inflammation

The present invention relates to novel human secreted proteins CC (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The CC (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The CC cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, CC cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, CC coronary arteriosclerosis and myocardial ischaemia), neural disorders, CC coronary arteriosclerosis and myocardial ischaemia), neural disorders, CC coronary arteriosclerosis, pulmonary disorders, renal disorders, CC quastrointestinal disorders, pulmonary disorders, renal disorders, CC quastrointestinal disorders and/or cancerous disease and conditions, for CC proliferative disorders and/or cancerous diseases and conditions or CC proventing neural damage which occurs in neuronal disorders or CC preventing neural damage which occurs in neuronal disorders or preventing neural damage which occurs in neuronal disorders or company disease, to enhance bone and pariodontal regeneration and aid in tissue CC transplants or bone grafts, to prevent skin aging or hair loss, to crass the company of the company of
